

Maintenance-free aluminum construction is durable and strong. Aluminum far exceeds other common railing materials such as wrought iron (which can rust), wood (which can decay or splinter) or vinyl (which has no structural properties.)

Craft-bilt's aluminum railing and deck system is ideally suited for worry-free seasonal waterfront properties and weather conditions

- Exclusive die-cast aluminum floor bracket covers hide all unsightly bolts and hardware for a clean finished look
- Gentle curves designed into the hand rail make it comfortable to the touch
- Specially fabricated caps provide a smooth, clean appearance while protecting fasteners from the elements
- Snap-in Picket spacers eliminate unsightly gaps between the pickets, while providing a solid look and feel
- Polyester Powder Coatings and Duracon® Thermosetting Acrylic Enamel finishes assure a long lasting, trouble-free finish that is surface-impact, corrosion and scratch resistant

Only aluminum is used – no plastic – even for the small parts, to assure strength and durability throughout the entire railing system
